PAYTM AI HACKATHON | TRACK 3

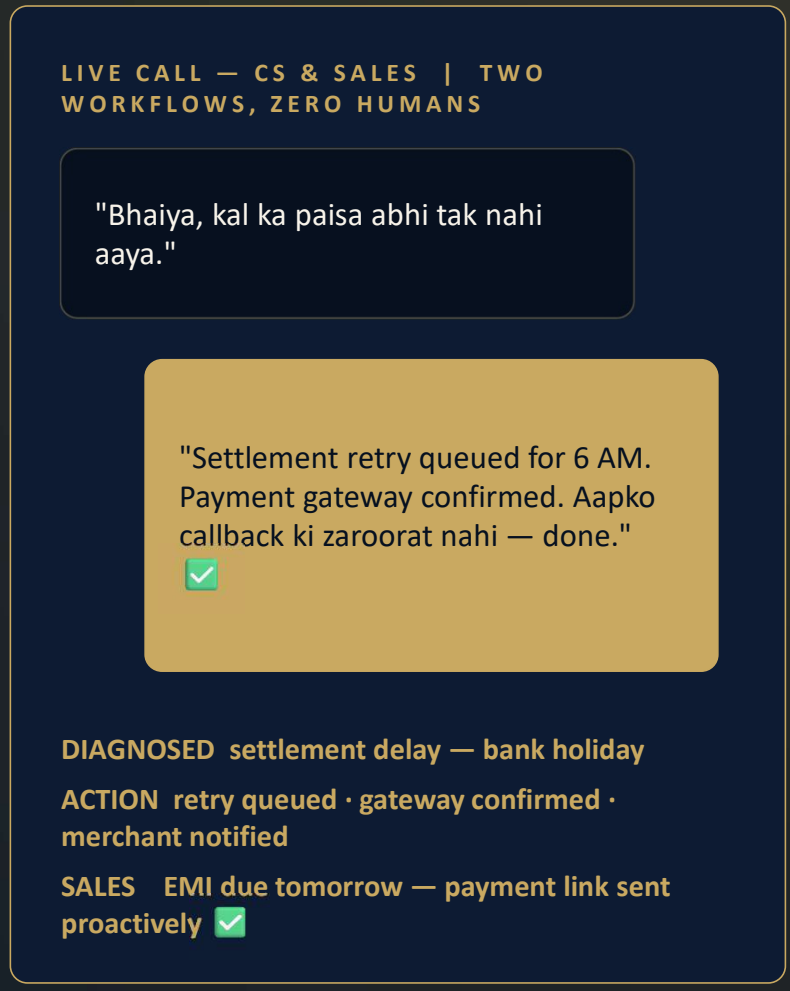

Sahayak

The AI Teammate That Doesn't Just Answer — It Gets the Job Done.

Track 3: Autonomous AI Teammates · Powered by Sarvam AI

Team Paytm Power Rangers

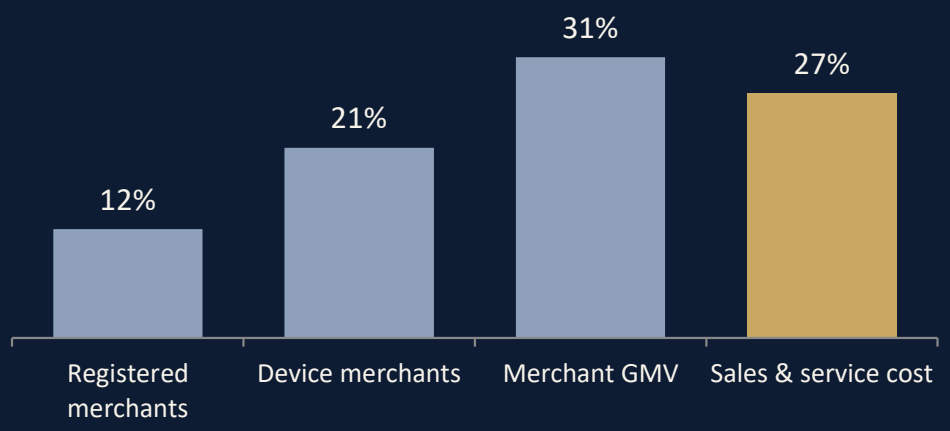

Lankipalli Tharun | Radhika Tenali

01 PROBLEM STATEMENT

Merchant servicing is breaking under its own weight — and more agents is not the answer.

Year-on-year growth, Q1 FY27 (Jun-26 vs Jun-25)

5.0 Cr registered merchants on Paytm

1.57 Cr device-subscription merchants, up 27 lakh in a year

₹339 Cr sales & service cost per quarter — growing faster than merchant base

Settlement delays (~40% of tickets)
"Kal ka paisa nahi aaya"

Soundbox failures (~25% of tickets)
"Soundbox bol nahi raha"

Failed payments (~20% of tickets)
"Paise kat gaye, mujhe nahi mile"

EMI & KYC blocks (~15% of tickets)
"Mera account limit ho gaya"

Source: Paytm Q1 FY27 earnings release, 20 Jul 2026. | Hiring more agents scales cost, not outcomes. Sahayak breaks this curve.

02 PROPOSED SOLUTION

One AI teammate — end-to-end ownership across customer service AND sales.

01 — Listen
Voice in: Hindi, Kannada, English

›

02 — Diagnose
Classify the issue, score confidence

›

03 — Fetch context
Settlement, device, loan, CRM & sales data — 6 systems

›

04 — Act
Multi-system action within guardrails

›

05 — Verify
Check the fix actually landed

›

06 — Close or escalate
Resolved + audit logged, or full-context handoff to human

Resolves on its own — CS & Sales

- CS: Retries failed settlements, confirms with gateway
- CS: Raises Soundbox replacements, gives tracking info
- CS: Re-syncs missing transactions across systems
- CS: Sends payment, EMI and KYC links
- Sales: Proactive EMI reminders + payment link delivery

Sahayak knows when NOT to act — that's a feature, not a fallback

- Fraud flag or unverified caller identity
- Transaction above ₹50,000 hard limit
- Active dispute, risk hold or hardship case
- Distressed caller or confidence below threshold

03 TECHNOLOGY / TECH STACK USED

Five layers — Sarvam AI at the voice, safety at the core, six Paytm systems in scope.

Sarvam AI — Voice Layer ★ Official AI Partner	Speech-to-text and text-to-speech for Hindi, Kannada and English. Purpose-built for Indian merchant speech patterns. Sub-2s latency per turn.
Agent Core — Sarvam AI LLM + Tool Calling	State-machine loop: Diagnose → Decide → Act → Verify. Confidence score on every step. Explicit reasoning trace — not a black box.
Guardrail Layer — Safety by Design	₹50K hard cap on financial actions · Caller ID verification before acting · Fraud flag pre-check · Append-only audit log · Confidence threshold gate
Paytm System Integrations — 6 API Surfaces	Merchant profile & KYC · Settlement & payment gateway · Device & logistics (Soundbox) · Loan & EMI management · CRM & ticketing · Sales outreach & payment links
Evaluation Harness — Designed Test Suite	Test scenarios covering CS + Sales workflows. Measures: resolution rate, escalation accuracy, zero unsafe actions, handoff completeness. To be demonstrated at the offline hackathon.

04 USP (UNIQUE SELLING PROPOSITION)

It acts across systems. It's safe. It escalates like a teammate. And it covers sales too.

01

Acts Across Systems, Not Just One

Fetches data from 6 Paytm systems, takes action, and confirms the outcome — not a lookup, a resolution.

02

Safe With Every Rupee

Caller verified, fraud checked, amount capped, action confirmed — before every financial move. Audit-logged. Reversible where possible.

03

Escalates Like a Senior Teammate

Human receives: issue summary, what Sahayak tried, next recommended action, full transcript. The human never starts from zero.

04

Covers Both Sales and Customer Service

Handles inbound resolution (CS) and outbound proactive action (Sales) — EMI follow-up, payment nudges, upsell triggers — in one framework.

05 IMPACT AND BENEFITS

Measurable outcomes for merchants, Paytm, and support teams — across CS and Sales.

Merchants

- Issues resolved in seconds, in their own language
- First-call resolution — no callbacks, no hold time
- Proactive sales touchpoints feel like service, not friction

Paytm

- Servicing cost curve bends without matching headcount
- Faster EMI follow-up protects loan collection performance
- Proactive Soundbox resolution improves device retention

Support teams

- Routine, repeatable tickets handled autonomously
- Every escalated case arrives complete — no re-investigation
- Human agents focus on complex, sensitive, high-value cases

DESIGN TARGETS — VALIDATED AT OFFLINE HACKATHON | Sales + CS Coverage

70%+
routine CS tickets resolved without human involvement

0
unsafe money actions executed

< 2 s
voice response latency per turn (Sarvam AI pipeline)

100%
of actions audit-logged — zero exceptions

06 BUSINESS MODEL

A model that saves ₹339 Cr, protects merchant revenue, and scales beyond Paytm.

01 Save

Paytm spends ₹339 Cr/quarter on sales & service. Sahayak targets the highest-volume repeatable categories first — every routine ticket resolved autonomously bends the cost curve without reducing merchant service quality.

02 Earn

Proactive EMI follow-up, payment link nudges, and Soundbox retention recover merchant revenue that currently falls through overloaded support queues. Every resolved issue becomes a retention event.

03 Scale

The same multilingual voice + multi-system action framework — built on Sarvam AI — is applicable to any fintech with a large merchant base. Sahayak becomes a B2B platform beyond Paytm.

Pricing Outcome-based: ₹5–15 per resolved ticket — Paytm pays only for results. Market 5 Cr merchants × ₹10/ticket × 30% addressable = ₹150 Cr+ annual opportunity inside Paytm alone. Pilot path Start with Settlement + Soundbox · Human approval on every money action · Widen as metrics hold.
